- ❖ Smart Health Scale is a connected scale designed for smart phones and free apps.
- ❖ Building on Bluetooth Smart Low Energy technology, the scale sets a record for simplicity of use in the category. Users only need to press a button to securely pair up the scale and a Bluetooth Smart Ready phone or tablet. The scale stores weight measurements of the entire family and passes the data to the mobile device when it's close by. Automatic connection can be made within about 50 meters (164ft). In a typical US home environment, it has a range of around 22 meters (72ft), sufficient to cover the entire house.
- ❖ To ensure privacy, the weight measurements are transmitted to mobile devices securely and are never sent directly to the cloud. The data can be analyzed and graphed for personal use. In a multi-user family environment, all users can set her measurements as private and prevent other users from viewing the data. Nevertheless, if the user wants to share the data in social or medical environment, this can be easily done in the app.
- ❖ Using the highly power efficient TI CC254x system-on-chip solution, the scale can last over 5 years on 4 AA batteries.
